For first time set-up. Use the items and tools listed to the right, provided with your LegExx. Attach the backrest and swing beam in any order you like!

**Assistance is recommended during assembly**

- 1x 5 mm hex key
- 1x 4 mm hex key
- 1x circlip opener
- 4x M8X10 screws
- 1x washer
- 1x circlip
- 1x cover disc
- 1x M6X12 screw

### Swing beam attachment

1. Remove the packaging around the shaft of the swing beam. Make sure the swing beam has its washer(s) on the shaft. Also, remove the rubber band holding it in place.
2. Insert the shaft, with washer(s) on, into the cylindrical housing. It needs to go in perfectly straight. Nudge it gently and do not use excessive force. Ask another person to push against the outer bearing as the shaft goes in. If the bearing pops out, put it back in.
3. Put the 25 mm washer from the tool bag onto the shaft piece sticking out from the cylindrical housing. Next, put the circlip into the groove of the shaft using the circlip opener.
4. Screw the cover disc in place using the 4 mm hex key for the M6X12 screw.

### Backrest mounting

1. Pull the red rubber tag on the side and pull the backrest support beam out to its rearmost position. This will reveal four screw holes.
2. Hold the backrest in place while attaching it. One person holds the backrest whilst the other person puts in the M8X10 screws.
3. Tighten all four screws with the 5 mm hex key.

Attaching the drive belt

1. Cut off the rubber band securing the drive belt.
2. Pull the loose end of the drive belt over the pulley and out from below. Make sure the belt is not twisted.
3. Insert the end of the drive belt through the slot of the flywheel shaft, from the side with the smaller groove, and out from the bigger groove. Again, make sure the belt is not twisted. **If you have trouble following the next steps, please skip to the video link below!**
4. Fold the end of the belt around the lock pin and pull the belt and pin back into the wider groove in the shaft.
5. The Belt automatically locks into the groove when you pull it firmly.

If this is your first Exxentric product, you might want to look up further instructions for attaching the drive belt. Please refer to the last two pictures on page 20 of LegExx Manual.
