

Single-turn buckle (kPulley 2)

This buckle was intended for use in combination with inertia levels up to 0.070 kgm².
Any use of higher inertia levels may be done at your own discretion and risk.

Step 1

Select your working height by adjusting the slider up or down as usual.
Hang the pulley block on the designated hook on the slider.

Step 2

Extend the belt out as far as possible, leaving no slack on both sides.

Step 3

Fold the lower belt at about 5 cm (2") from its extremity to create slack in the upper belt.
