

Regulatory demand on Exxentric products in the EU

EXXENTRIC's product range consists of three different device families: kBox¹, kPulley² & LegExx³ (the "DEVICES").

The DEVICES are all gym equipment for sport or leisure purposes and not medical devices. Their primary purpose is to function as pieces of fitness equipment and not to measure a physiological function.

The DEVICES can be used as physical training tools for rehabilitation purposes when supervised by a personal trainer or other trained professionals.

The DEVICES do not perform any diagnostics, monitoring, treatment, alleviation of or compensation for any injury or disability.

*The DEVICES comply with applicable regulations and **2001/95/EC General Product Safety Directive**.*

*The kMeter (art. no. 20002) is **CE-marked according to 2014/53/EU Radio Equipment Directive and FCC and ISED-certified**.*
